

Evolution E2

Company: Blue Dot Display
Location: Surrey and West Sussex
Name: Adrian de Candole
Product: Evolution E2 & Javelin
Application: Print & Printing Services

Executive Summary

Blue Dot Display purchased an Evolution E2 in May 2018 and they already had a Javelin Cutter in their inventory. They particularly wanted to utilise the length of cut and quality of the overall product and needed a new cutter particularly for the preparation of Pop Up graphics which require virtually undetectable joins.

Challenges

Blue Dot Display required a new cutter to complement the Javelin Cutter that they had already purchased to help with the preparation of pop-up graphics. Based on the reviews and feedback from other users, as well as their previous experience with Keencut machines, Blue Dot Display understood the Evolution E2 to be one of the best cutters on the market.

How Product Helped

The Evolution was chosen by Blue Dot display for the length of cut, quality of the product and the type of media it could cut. The team cuts rollable media on the E2, mainly for pop up and roller banner graphics and then uses the Javelin for cutting foamex and dibond.

Testimonial

Adrian de Candole of Blue Dot Display says: *"We are very satisfied and hugely impressed with the precision cutting of this machine. The E2 has had a dramatic improvement in accuracy with the lining up of panels and are extremely impressed with the ease of cut."*
