

The Easy Measuring Scale has been designed to aid in measuring and aligning rigid and semi-rigid materials and is the perfect accessory for any vertical Keencut machine. With much better visibility of the measuring scale from above precision cutting has never been easier and you will achieve a new level of quality and productivity to your work area. The sliding stops sit against the edge of the material exactly as they do on your existing system – if you don't need the sliding stops, they just fold away.

The two halves are designed to slide seamlessly onto the left and right hand side of the squaring arm on any SteelTrak, Excalibur 5000, and Excalibur 3S. It is simple to install and calibrate with precise, micro-adjustable, imperial, and metric scales. We estimate that you can have an Easy Measuring Scale ready to go in only 20 minutes.

Just scan the QR code on the scale with your phone for immediate access to an easy-to-follow installation video.
