

Keencut SteelTrak

Save money – stop bottlenecks!

The production process is all about workflow, and the Keencut SteelTrak is the perfect solution to fast forward your print finishing.

It makes no sense tying up an expensive CNC router with repetitive small straight cutting. The SteelTrak removes bottlenecks in workflow by providing quick repeatable cutting or one-off cuts.

The SteelTrak is always ready for immediate action and leaves your CNC machine for the more complex tasks. You do not need a specialist operator, there's no programming and no risk of power failure.

The SteelTrak will easily cut and finish the toughest materials including ACM up to 4mm (1/8") thick and PVC foam board up to 13mm (1/2") thick. There are no rough edges to finish, no dust, and no cleaning up. It's fast to set up with production stops to ensure identical cutting for multiple boards. As with all Keencut products safety and accuracy are assured.
