

Output up – Fast Forward Your Print Finishing!

The SteelTrak cuts and finishes in one. There's no dust and no scrapings, so there is nothing to clean up. That's no added finishing or cleaning time!

The SteelTrak really does Fast Forward your print finishing.

The SteelTrak's ability to cut and finish ACM in one effortless slice means that your material is immediately safe to touch, and your panels are clean and dust free.

When any material is cut on a bandsaw or router, you must ensure it is fully cleaned or expensive errors will occur when you apply the vinyl. With a SteelTrak, materials are cut and clean – there's no extra work

And, it's not just about saving finishing time. Dust in the workshop can damage equipment, ruin your print, and cause safety hazards.

Rob at printer manufacturer Roland explained why cutting without dust and debris is so vital, 'Cleanliness in the print shop is really important. You don't want dust or debris causing damage to printer heads or causing printer downtime. It's also about the quality of your final print. A speck of dust on the print can ruin everything. To get the best quality you need to keep your machines and materials as clean as possible.'

Material dust and sparks are a dangerous combination in the signshop. Aluminium and Steel Composite Materials are amazing and versatile materials, but they must be cut safely. The SteelTrak is the ideal cutting solution as it cuts metal composite with no sparks and no dust.

By cutting and cleanly finishing in one, the SteelTrak saves you time, decreases the possibility of damage to expensive equipment, reduces print and application mistakes, and keeps the workshop environment clean and safe.

Choose the Keencut SteelTrak and watch costs go down and output go up!
